

**Project Design Phase
Proposed Solution Template**

Date	15 February 2025
Team ID	Team 2
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In many organisations, standard laptop requests are still handled manually. After an employee raises a request, approval, procurement follow-up and configuration depend on emails and reminders between people. The configuration step in particular is easy to overlook or delay. As a result, employees wait longer to receive a usable laptop, requesters are not told what is happening to their request, and the IT department spends time on repetitive coordination instead of higher-value work.
2.	Idea / Solution description	Automate the whole standard laptop request using ServiceNow Flow Designer: • The employee orders the Standard Laptop from the Service Catalog (Hardware > Standard Laptop > Order Now). • A flow named “Standard Laptop Task” (Service Catalog trigger, Global scope, run as System User) starts automatically and sends the request for approval. • Once the request is approved, the flow creates a Catalog Task with the short description “Laptop needs to be configured” and assigns it to the Hardware group. • The requester receives e-mail notifications when the request is approved or rejected. • The flow is attached to the Standard Laptop catalog item through its Process Engine tab, so every new order uses it with no manual step.

S.No.	Parameter	Description
3.	Novelty / Uniqueness	• Uses low-code Flow Designer instead of legacy workflows or manual ticket creation. • Task creation is gated by approval, so the Hardware team only receives work for approved requests. • No custom scripting is needed. The same pattern can be reused for other catalog items by changing the item, condition or assignment group. • Full traceability from Request (REQ) to Requested Item (RITM) to Catalog Task (SCTASK), with every run recorded in the Flow Execution log.
4.	Social Impact / Customer Satisfaction	• Employees receive their laptops sooner and are kept informed, which reduces frustration and waiting time. • New joiners can start work with a ready device, supporting a smoother onboarding experience. • The IT team is freed from repetitive follow-ups and can focus on support work that needs people. • A consistent, transparent process treats every request fairly and reduces human error.
5.	Business Model (Revenue Model)	This is an internal enterprise IT solution, so the benefit is cost saving rather than direct sales revenue: • Saves staff hours now spent on manual coordination and reduces the cost of delayed or missed configuration. • Runs on an existing ServiceNow subscription, so no extra tooling licence is required. • It can also be packaged as a reusable catalog-automation template that a ServiceNow implementation partner offers to clients as a one-time implementation or managed-service fee.
6.	Scalability of the Solution	• More hardware items (monitors, phones, accessories) can be added by attaching a similar flow or a reusable subflow. • Conditions such as approval only above a price threshold, or different Hardware groups per location, can be added without redesigning the flow. • Planned extensions: auto-assignment to a specific technician, asset record creation on receipt, and vendor purchase-order integration. • The ServiceNow platform handles growth in users, departments and request volume.
