Project Overview:

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description: This project automates the standard laptop ordering process using ServiceNow Flow Designer. Employees submit laptop requests through the Service Catalog. The workflow obtains approval, creates a configuration task for the Hardware team once the request is approved, and sends notifications to the requester.

Project Version: 1.0

Testing Period: [Start Date] to [End Date]

Testing Scope:

Features and functionalities to be tested:

- Ordering the Standard Laptop from Service Catalog > Hardware
- Flow “Standard Laptop Task” starting from the Service Catalog trigger
- Approval of the requested item
- Catalog Task creation with short description, description and Assignment group Hardware
- E-mail notifications to the requester (approved and rejected)
- Attaching the flow to the catalog item through the Process Engine tab
- Flow execution log

User stories or requirements to be tested:

- As a member of the IT procurement team, I want standard laptop requests to be approved, converted into tasks and assigned to the Hardware team automatically, so that laptops are configured promptly and users are kept informed.
- As an employee, I want to order a standard laptop from the catalog and be told whether it is approved or rejected.
- As a Hardware team member, I want a configuration task assigned to my group for every approved request.

Testing Environment:

URL/Location: Team ServiceNow instance (add the instance URL here)

Credentials (if required): Not recorded in this document for security. Use the team’s test requester and approver accounts.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Order the Standard Laptop and approve the request (positive)	1. Go to Service Catalog > Hardware > Standard Laptop. 2. Click Order Now. 3. Open the Request, go to the Approvers tab and approve the record. 4. Open the Requested Item and check Catalog Tasks.	A Catalog Task is created with the short description "Laptop needs to be configured" and Assignment group Hardware.	REQ0010001 and RITM0010001 were created. SCTASK0010001 was created and assigned to Hardware. The short description read "Laptop needs to Configured" (see BG-001).	Pass (minor wording issue)
TC-002	Reject the approval (negative)	1. Order the Standard Laptop. 2. On the Approvers tab, reject the approval. 3. Open the Requested Item and check Catalog Tasks.	No Catalog Task is created. The requester receives a rejection e-mail.		
TC-003	Flow is attached to the catalog item	1. Go to Maintain Items and open Standard Laptop. 2. Open the Process Engine tab.	The Flow field shows the "Standard Laptop Task" flow and no other automation is selected.	The Process Engine tab showed the Standard Laptop task flow in the Flow field.	Pass
TC-004	Approval e-mail is sent to the requester	1. Order the Standard Laptop. 2. Approve the request. 3. Check the requester's mailbox or the System Mail log.	The requester receives an e-mail saying the request is approved and the laptop is being prepared.		
TC-005	Flow execution is recorded	1. Complete TC-001 and TC-002. 2. Open Flow Designer > Executions.	Both runs appear as completed, with each step shown.		

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Short description reads "Laptop needs to Configured" (the word "be" is missing).	1. Order the Standard Laptop. 2. Approve the request. 3. Open the Catalog Task SCTASK0010001.	Low	Open	Correct the text in the Create Catalog Task action to "Laptop needs to be configured" (Short description and Description).
BG-002	A configuration task could be created for a request that is not approved, if the flow does not wait for the approval decision.	1. Order the Standard Laptop. 2. Reject the approval. 3. Check the Catalog Tasks tab.	High	In Progress	Add Ask for Approval and an If (Approved) condition before Create Catalog Task, then run TC-002 again.

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
