

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	2
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Request Submission	Submit laptop request through the Service Catalog form Select standard laptop model and enter business justification Provide delivery location and required-by date
FR-2	Workflow Automation (Flow Designer)	Automatically trigger the flow when a laptop request is submitted Evaluate conditions to decide whether approval is required Log every flow execution for tracking and troubleshooting
FR-3	Approval Management	Send approval request to the manager via email / portal Approve or reject the request with comments Send reminder for pending approvals
FR-4	Procurement Task Creation	Automatically create a procurement (catalog) task after approval Assign the task to the IT procurement group Update task status when the laptop is ordered and delivered
FR-5	Notifications	Email confirmation to the employee on request submission Notification of approval / rejection decision Notification when the laptop is delivered and the request is closed

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The request form is simple and clear, so an employee can order a standard laptop in a few minutes and track its status from the portal without training.
NFR-2	Security	Access is controlled through user roles and ACLs; only the requester, approver and procurement team can see or act on a request. Data is protected with secure login and HTTPS.

FR No.	Non-Functional Requirement	Description
NFR-3	Reliability	The flow runs the same steps every time, handles errors by logging them and notifying the administrator, so no request is lost or processed twice.
NFR-4	Performance	The flow starts immediately after submission, and approval, task creation and notifications complete within seconds under normal load.
NFR-5	Availability	The solution runs on the ServiceNow cloud platform and is available to employees whenever the portal is accessible (24x7, excluding planned maintenance).
NFR-6	Scalability	The flow and catalog item can handle a growing number of employees and laptop requests, and new models or approval rules can be added without redesigning the flow.
